Limited to 60 spots

Training overview

This **one-day training provided at no cost** will teach professionals with AWS expertise about the core capabilities of Google Cloud in the four technology pillars: networking, compute, storage, and database. We'll use lectures, demos, and hands-on labs to show you the similarities and differences between the two cloud platforms and teach you about some basic tasks on Google Cloud. **Lunch will be provided** at the Google Cafe.

What you will learn

- Identify Google Cloud counterparts for Amazon VPC, subnets, routes, NACLs, IGW, Amazon EC2, Amazon EBS, auto-scaling, Elastic Load Balancing, Amazon S3, Amazon Glacier, Amazon RDS, Amazon Redshift, AWS IAM
- Configure accounts, billing, projects, networks, subnets, firewalls, VMs, disks, auto scaling, load balancing, storage, databases, IAM, and more
- Manage and monitor applications
- Explain feature and pricing model differences

Who should attend this event?

This training is designed for system administrators, solutions architects, and SysOps administrators who are familiar with AWS features and setup and want to gain experience configuring Google Cloud products immediately.

Individuals

planning to deploy applications and create application environments on Google Cloud

Developers, systems operations professionals, and solution architects

getting started with Google Cloud.

Executives and business decision makers

evaluating the potential of Google Cloud to address their business needs.
