

Grouper new service wizard

Grouper 2.4 will have an upcoming patch to help administrators create a new service.

The wizard will prompt them for a "key", and friendly name (optional). Also the service description.

It will ask the user what they would like in the structure

1. Do they want admin groups with inherited permissions (e.g. for ADMIN, READ/UPDATE, READ, UPDATE, etc)
2. Configuration will set the directory names and group names (with variables for key and friendly name)
3. Optionally a folder will be created for authorization groups
4. Optionally a folder could be created for attributes
5. It could offer to setup attestation on "Etc" ADMIN groups

Future version could add the "service" tag
